High Frequency Press and Weather

W9FO will appreciate data on Press, Time, and Weather Schedules on frequencies above 3000 KC (below 100 metres). These are for the benefit of ships at sea, and the majority of these schedules are interrupted by a three-minute "silent period" at the 15th and 45th minute of each hour. At these times all ship operators are standing-by on 500 KC (600m) for SOS calls of ships in distress.

Note that time given is GMT (Greenwich Mean Time). U. S. Eastern Standard Time PLUS FIVE HOURS = GMT. BB = Major League Baseball Scores. CQ = General call, to all stations. Px = Press News. SX = Stock market quotations. Tx = Time signals. If followed by a number, means only that number quoted. From New York Exchange unless otherwise stated.

Many thanks to operators of KUP, WHD, WNCI, WRH, and others, for their help.

CODE INSTRUCTION

Use the "Instructograph" and the Book of Instruction for a month before purchasing.

Know what you are buying.

The Instructograph

The Instructograph, Tapes, and Book of Instruction is equally useful to beginners and those more or less advanced in the work. The machine may be used to operate a buzzer, oscillator or telegraph instrument. Either "Continental" or "American" Morse tapes may be had.

EVERYTHING NEEDED

Our equipment supplies everything that you can possibly use to advantage in learning the code. The Instructograph does the sending, just as an Instructor would do. The speed may be regulated by the machine and in addition the tapes are graduated from very slow to very fast. The Book of Instruction tells one how to practice to the very best advantage, just as the Instructor would do. Therefore, you would have everything needed, except the "Will to Work." You will have to supply that.

MACHINES TO RENT

The Instructograph, Tapes and Book of Instruction may be rented for a small monthly charge. *And, such rental cost may be applied to the purchase of a new machine if wanted.*

Big Money for You

in this New Radio Field

Have you, who are interested in the development of radio, overlooked the big, profitable field of supplying programs for broadcasting?

While other lines of business have been in a hopeless slump, there has been a phenomenal growth in chain and local broadcasting for advertising and selling purposes. This has created an entirely new field of writing. Those who have been most successful in this work have in many cases had no previous experience in any form of writing.

It is estimated that there are over 6,000 commercial programs broadcast daily. This tremendous output of radio entertainment has been such a heavy drain on the few trained radio writers that it has become necessary to develop and train new writers at once. The "warmed over" stories from magazines, the movies and the stage have been used only until such time as writers can be trained to produce a strictly radio type of entertainment.

Advertisers find that they can reach an enormous market for their products by the use of radio. For this reason they can spend huge sums for programs. In order to attract listeners to their programs quickly they have employed the highest salaried stars in the country. But they are finding that listeners soon tire of an individual personality and today they are frantically casting about for new ideas, fresh and original themes to entertain their audiences.

Due to their knowledge of the limitations of radio and understanding of its problems, radio amateurs have been highly successful in the writing and preparation of programs.

Here is a real opportunity for you to turn your spare time into money, and enter this highly paid profession.

Send in the coupon at once for full information and FREE TEST of your qualifications for this work.

I alone Guarantee

Consistent ~ day in and day out WORLD-WIDE RECEPTION

The SCOTT 15-550 METER ALL-WAVE Deluxe RADIO

There are no "ifs" "buts" "under favorable conditions" or other equivocations in the SCOTT guarantee. It says, simply and clearly, that the set I build for you will receive foreign broadcasts from stations as far as 10,000 miles away, with loud-speaker volume, consistently, at all seasons of the year.

In addition, every part of the set (except tubes) is guaranteed against breakdown or service failure for a five-year period instead of the ordinary 90-day term.

Beside bringing you dependable direct short wave reception of advertising-free foreign programs, this remarkable radio will receive literally everything upon the North American continent on the regular broadcast band. Its rich, natural tone is a revelation—giving you reproduction of voice and music so exact that variation from actuality can be measured only with super-delicate instruments, being undetectable by the human ear.

Such performance comes only from exacting laboratory construction, constantly checked and tested by extensive scientific equipment. Backing it is the SCOTT experience of more than eight years in building world's-record-breaking radio receivers.

Claims are easily made—a *Guarantee* is something different! Which do you want—the *hope* that your receiver can deliver performance, or *positive assurance* that it will?

Then send at once for all particulars about the radio known as "The World's Finest Receiver."

THE HAM SUPER

The Ham Super has been designed especially for amateur communication service. The greatest names in amateur radio—men for whom you have the most profound respect—have contributed their advanced engineering knowledge to give this instrument features heretofore unavailable in amateur receivers.

It is a seven-tube AC (or optionally six-tube battery) operated superheterodyne covering the range of 1500 to 15,000 kilocycles in four bands, each with full band spread and c.w. features for the 1700, 3500, 7000 and 14,000 kc. amateur bands. It provides a degree of sensitivity and selectivity exceptional in amateur receivers.

Through the use of the new Shielded Unit Inductors, all three coils for r.f., first detector and oscillator circuits are *simultaneously* changed in a single operation *from the front panel*, and 60° dial band spread tuning for the four amateur

bands is instantaneously provided by a half-inch movement of the Unit Inductor in use. The use of a tuned r.f. stage preceding the first detector makes for the elimination of "repeat spot" or image frequency interference.

Regeneration makes overall sensitivity so high as to be difficult to measure, but sensitivity will approximate better than 1 microvolt absolute, or $\frac{1}{4}$ microvolt per meter. Offset tuning provides practically "single signal" selectivity.

Unquestionably . . . The Ham Super is the most useful receiver ever designed for the amateur. Mail the coupon with 3c stamp for complete specifications on this and other amateur specialties.
